EDITORIAL NOTE

The INDEX includes original publications in all languages, together with translations and new editions in English, French, German, and Italian. Offprints of magazine articles are not noted where the original sources are accessible to the compilers. Last year's titles received too late for insertion are included in this issue, and earlier titles are inserted in exceptional cases.

The coöperation of authors and publishers is requested in sending to the editor a careful description of books and articles for future issues, and also in noting errors and omissions. Accuracy and uniformity are sought in the *wording of title, journal or publisher, volume or place of publication, and pagination*. Authors will confer a favor by indicating the suitable classification of such works as they bring to our attention by title only.

We venture once more to call the attention of authors and editors to certain embarrassments which hamper the compilation and use of the bibliography.

1. The editor frequently receives imperfect references to articles and books which are inaccessible to him. A moment's examination of a page of the INDEX will inform the author or the publisher upon the materials necessary to an intelligible description. To the periodical reference, *volume* and *page* are essential. Books must carry the year of publication. When American publishers adopt the custom of announcing the date (year) of their publications, their works will be better represented in the annual bibliographies.

2. The omission of authors' initials is a frequent source of perplexity in compiling and using references. To avoid confusion of identity, every contributor to science, however great his contemporary fame, should feel bound to give at least his initials and full last name.

3. Accuracy of citation is greatly assisted if offprints are allowed to retain their original page numbers.

4. From the bibliographer's standpoint it is extremely desirable that every magazine should number its volumes consecutively, not merely with the year-number, and should avoid inserting "supplementary volumes." It is also desirable to avoid "new series" of old magazines under the same title. These peculiarities unneces-

sarily complicate citations, and cause loss of time in consulting the files of a journal.

The classification of titles in a general bibliography is logically imperfect. In assigning articles and books to their appropriate rubrics the editor is obliged to consider ease of reference above systematic consistency. He attempts to place a given reference where the intelligent user is most likely to look for it. The attempt is not invariably successful both because many references are inherently ambiguous and because readers differently conceive the setting of the various topics. In the present list, *e.g.*, an entry may at once concern perception and action, or emotion and religion, or feeble-mindedness and education. The most troublesome ambiguities of this sort have been somewhat reduced by cross references under the headings (see *Contents*, below); but the expert use of the INDEX must rest, in large measure, upon the technical knowledge and the sagacity of the reader. As regards the general range of the bibliography, it should be said that the inclusion of many references to physiology, anatomy, sociology, anthropology, medicine, education, and philosophy does not indicate an independent treatment of these foreign subjects. It only anticipates, in an imperfect way, the psychologist's vagrant excursions into these neighboring fields.

The INDEX for 1923 contains a list, alphabetized under standard abbreviations, of the chief periodicals annually searched for titles, together with editor and publisher, and (where available) their addresses.
